

## Cloud Migration

### The Challenge

One of the world's largest retail grocery chains made a pivotal decision to migrate their systems, applications and data to a **new primary public cloud provider**, which required critical budgetary and workforce compartmentalization decisions to ensure a smooth transition. In addition, leadership had already made a fundamental decision that the transition and subsequent modernization would be done through an **application-by-application strategy**, requiring buy-in from all internal teams at different points in the process.

### Our Solution

Aditi was tasked with analyzing the **current pricing model, budget restrictions and current cloud usage efficiency**. Aditi first brought in a business analyst to build out a comprehensive show back and charge back pricing model to ensure each team adhered to budgetary restrictions. The model was configured on a year-by-year basis, in which each application teams' expenses were categorized during the first fiscal year, and then charged back in the second year once each subproject was complete. This was further compounded by **the integration of an accessible dashboard, allowing executives and application teams to access details, charges, and assignments for different projects, ensuring team-wide transparency and responsibility**.

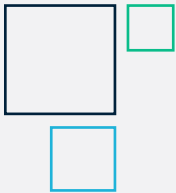

The Aditi team subsequently sourced and deployed experienced cloud engineers to assist application teams with each transitional process, while building out project requirements. This included work on the corresponding dashboard, assessing technical components needed for a successful migration, and evaluating which systems, data and proprietary processes needed to be primed for the transition.

## The Result

**Aditi ensured a successful, smooth, and transparent migration to the new cloud service provider, Microsoft Azure.**

The business model proved to be an invaluable tool for the client, as many companies overspend and overexert their teams during cloud migrations. This model and the corresponding dashboard fundamentally influenced how **each team made data-driven and cost-effective decisions during subprojects, empowering optimal financial applications and compartmentalization.** This provided the necessary foundation for the client's critical cloud migration.

# Aditi Empowers Cloud Migrations

Looking to migrate to a new cloud environment? Aditi's dedicated teams of remote access managers, technical project managers and cloud engineers work collaboratively with our clients from the onset --ensuring all technical, financial and business-specific requirements are met. Our teams guarantee efficiency, flexibility, and accountability, empowering our client's migrations and helping optimize their IT frameworks.
